I think it very hard to imagine that the end of the World, because before the end of the World that must be have so many innocent people died and everything mess up, people are all kill each other, also will be something even hunman cannot imagine. But when I imagine that the

end of capitalism is earlier, because if the society continue become like this, a large gap between rich and poor, one day capitalism will be end anyway, but that is not a good thing, because the society need rich and poor, if it cannot be balanced, the world end will come to the next.

I think when 2050 I will be live in An Island nation somewhere in the earth. When that time I am already 53 years old, and I want to have the life is peace and I love sunshine and beach, when I 53 years old, I think I am enough with the city life, really should get rid of it and make the life more like what I really want, everybody only alive once, so when we young we should not waste the time, we should try what we can be the best, but when we gets older, when we realize what is the life what we are exactly want, and then just to do it.
